Ankylos implants show high implant survival rate and low rate of peri-implant bone loss after up to 20 years in function.

93.3% Implant survival rate after 204 months

Unchanged implant design:
- Progressive threads
- Platform shift
- Morse taper connection

<1 mm**

University study*

* 36 oral surgeons treated patients at Frankfurt University, Germany
** Less than 1 mm vertical bone loss was observed for 85.2% of the implants after 17 years
